

How Are DBAs Really Managing Their Data?

There's a lot of hype around unstructured data. However, a recent survey of 300 database administrators (DBAs) suggests that most organizations will continue to focus on managing structured data.

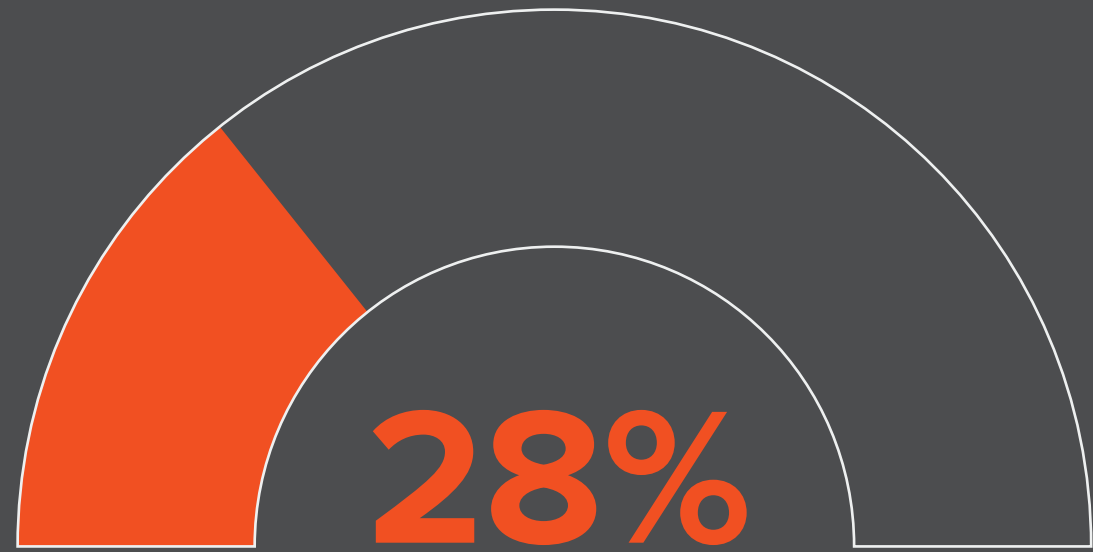

Structured data

VS.

Unstructured data

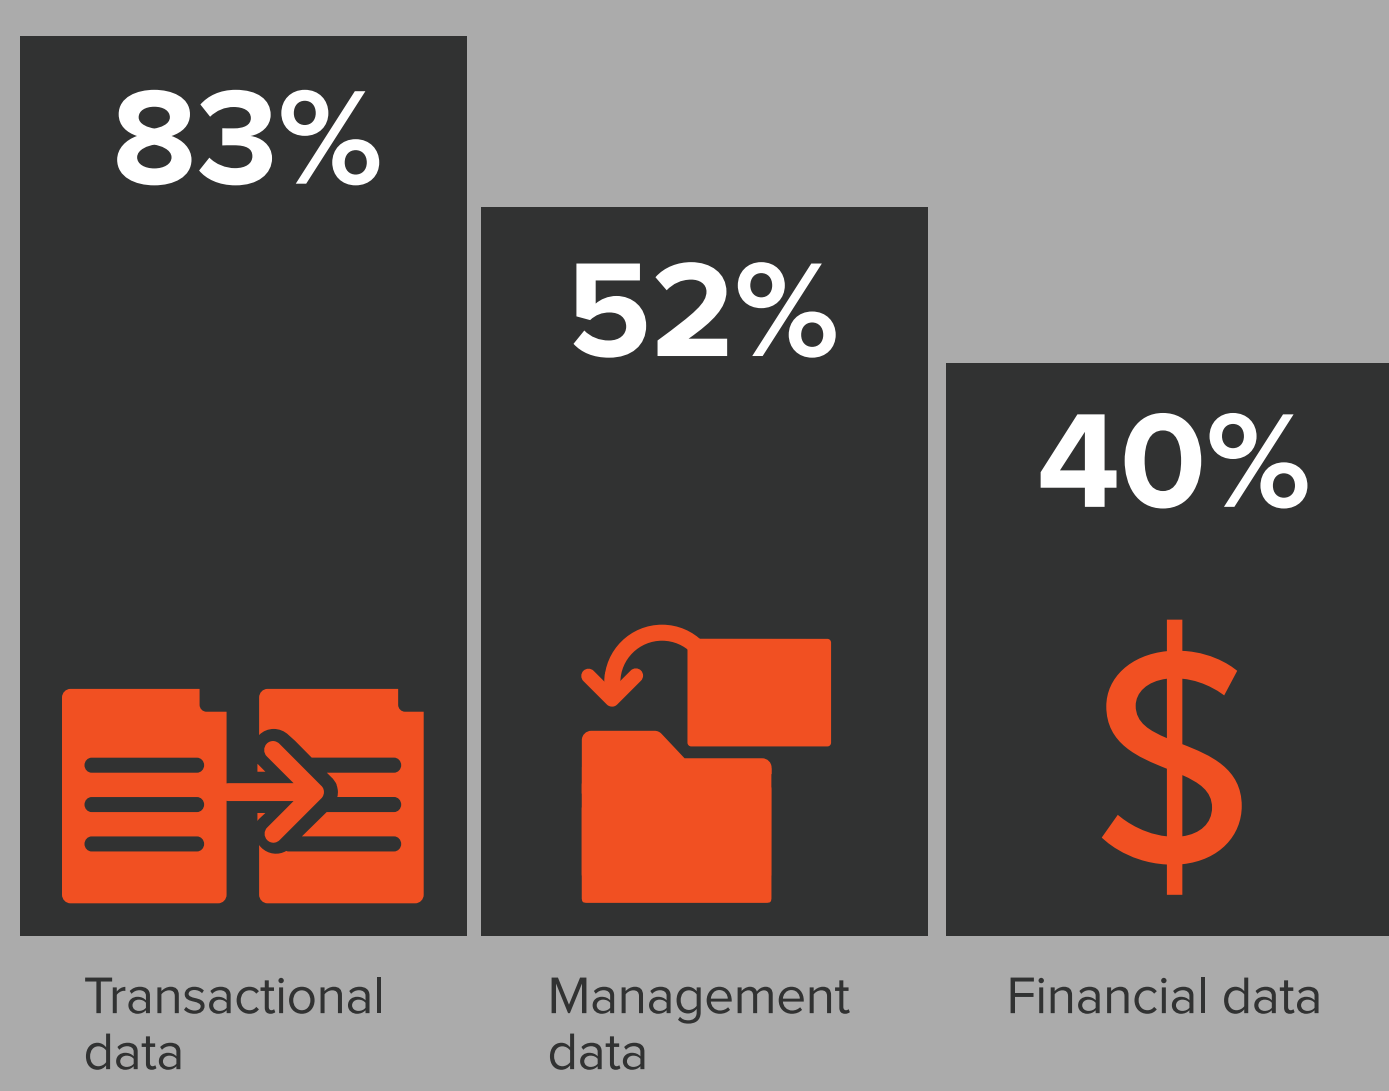

of data being managed is structured for most organizations

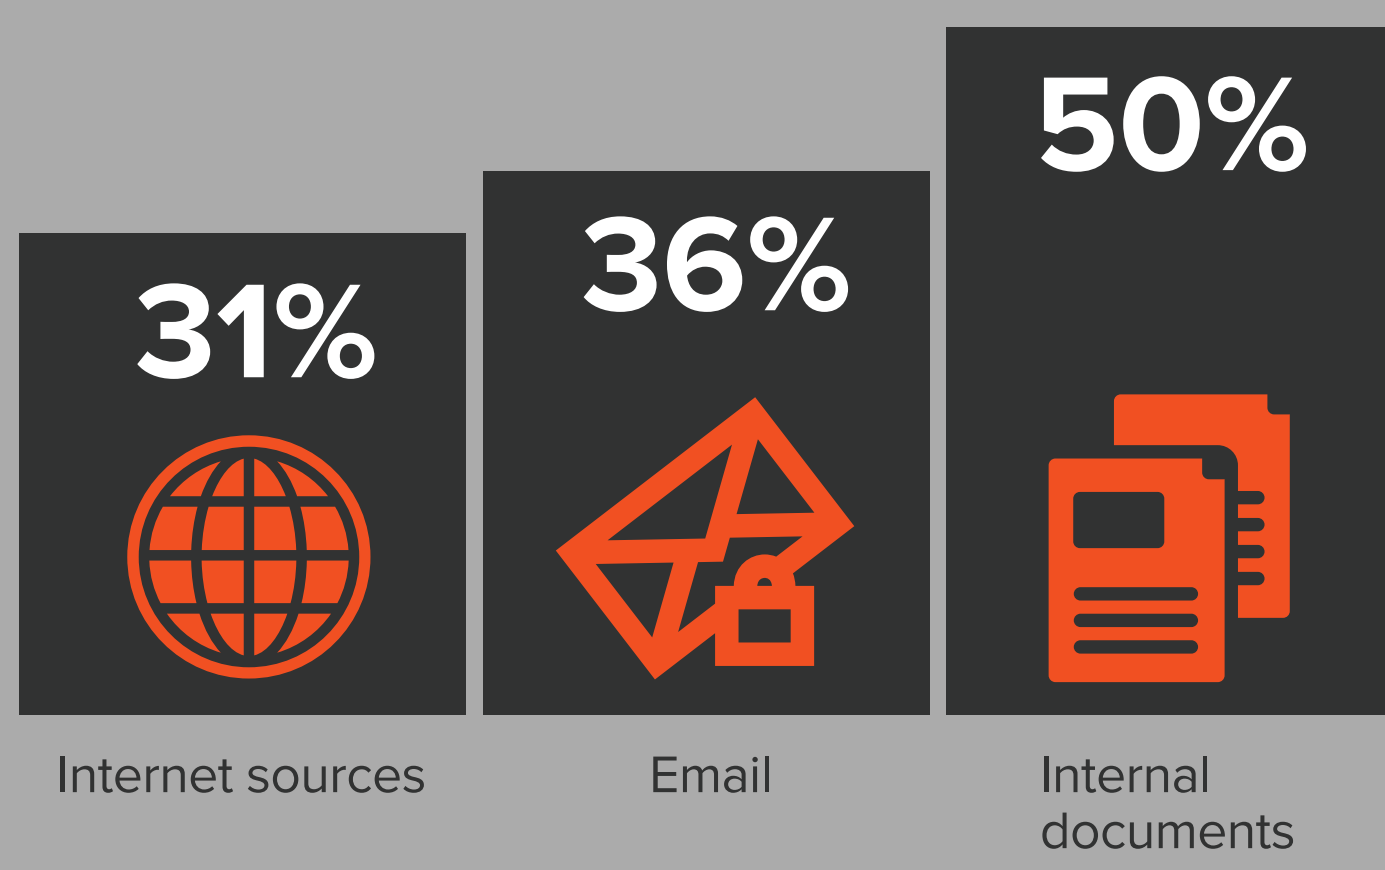

of organizations don't actively manage unstructured data at all

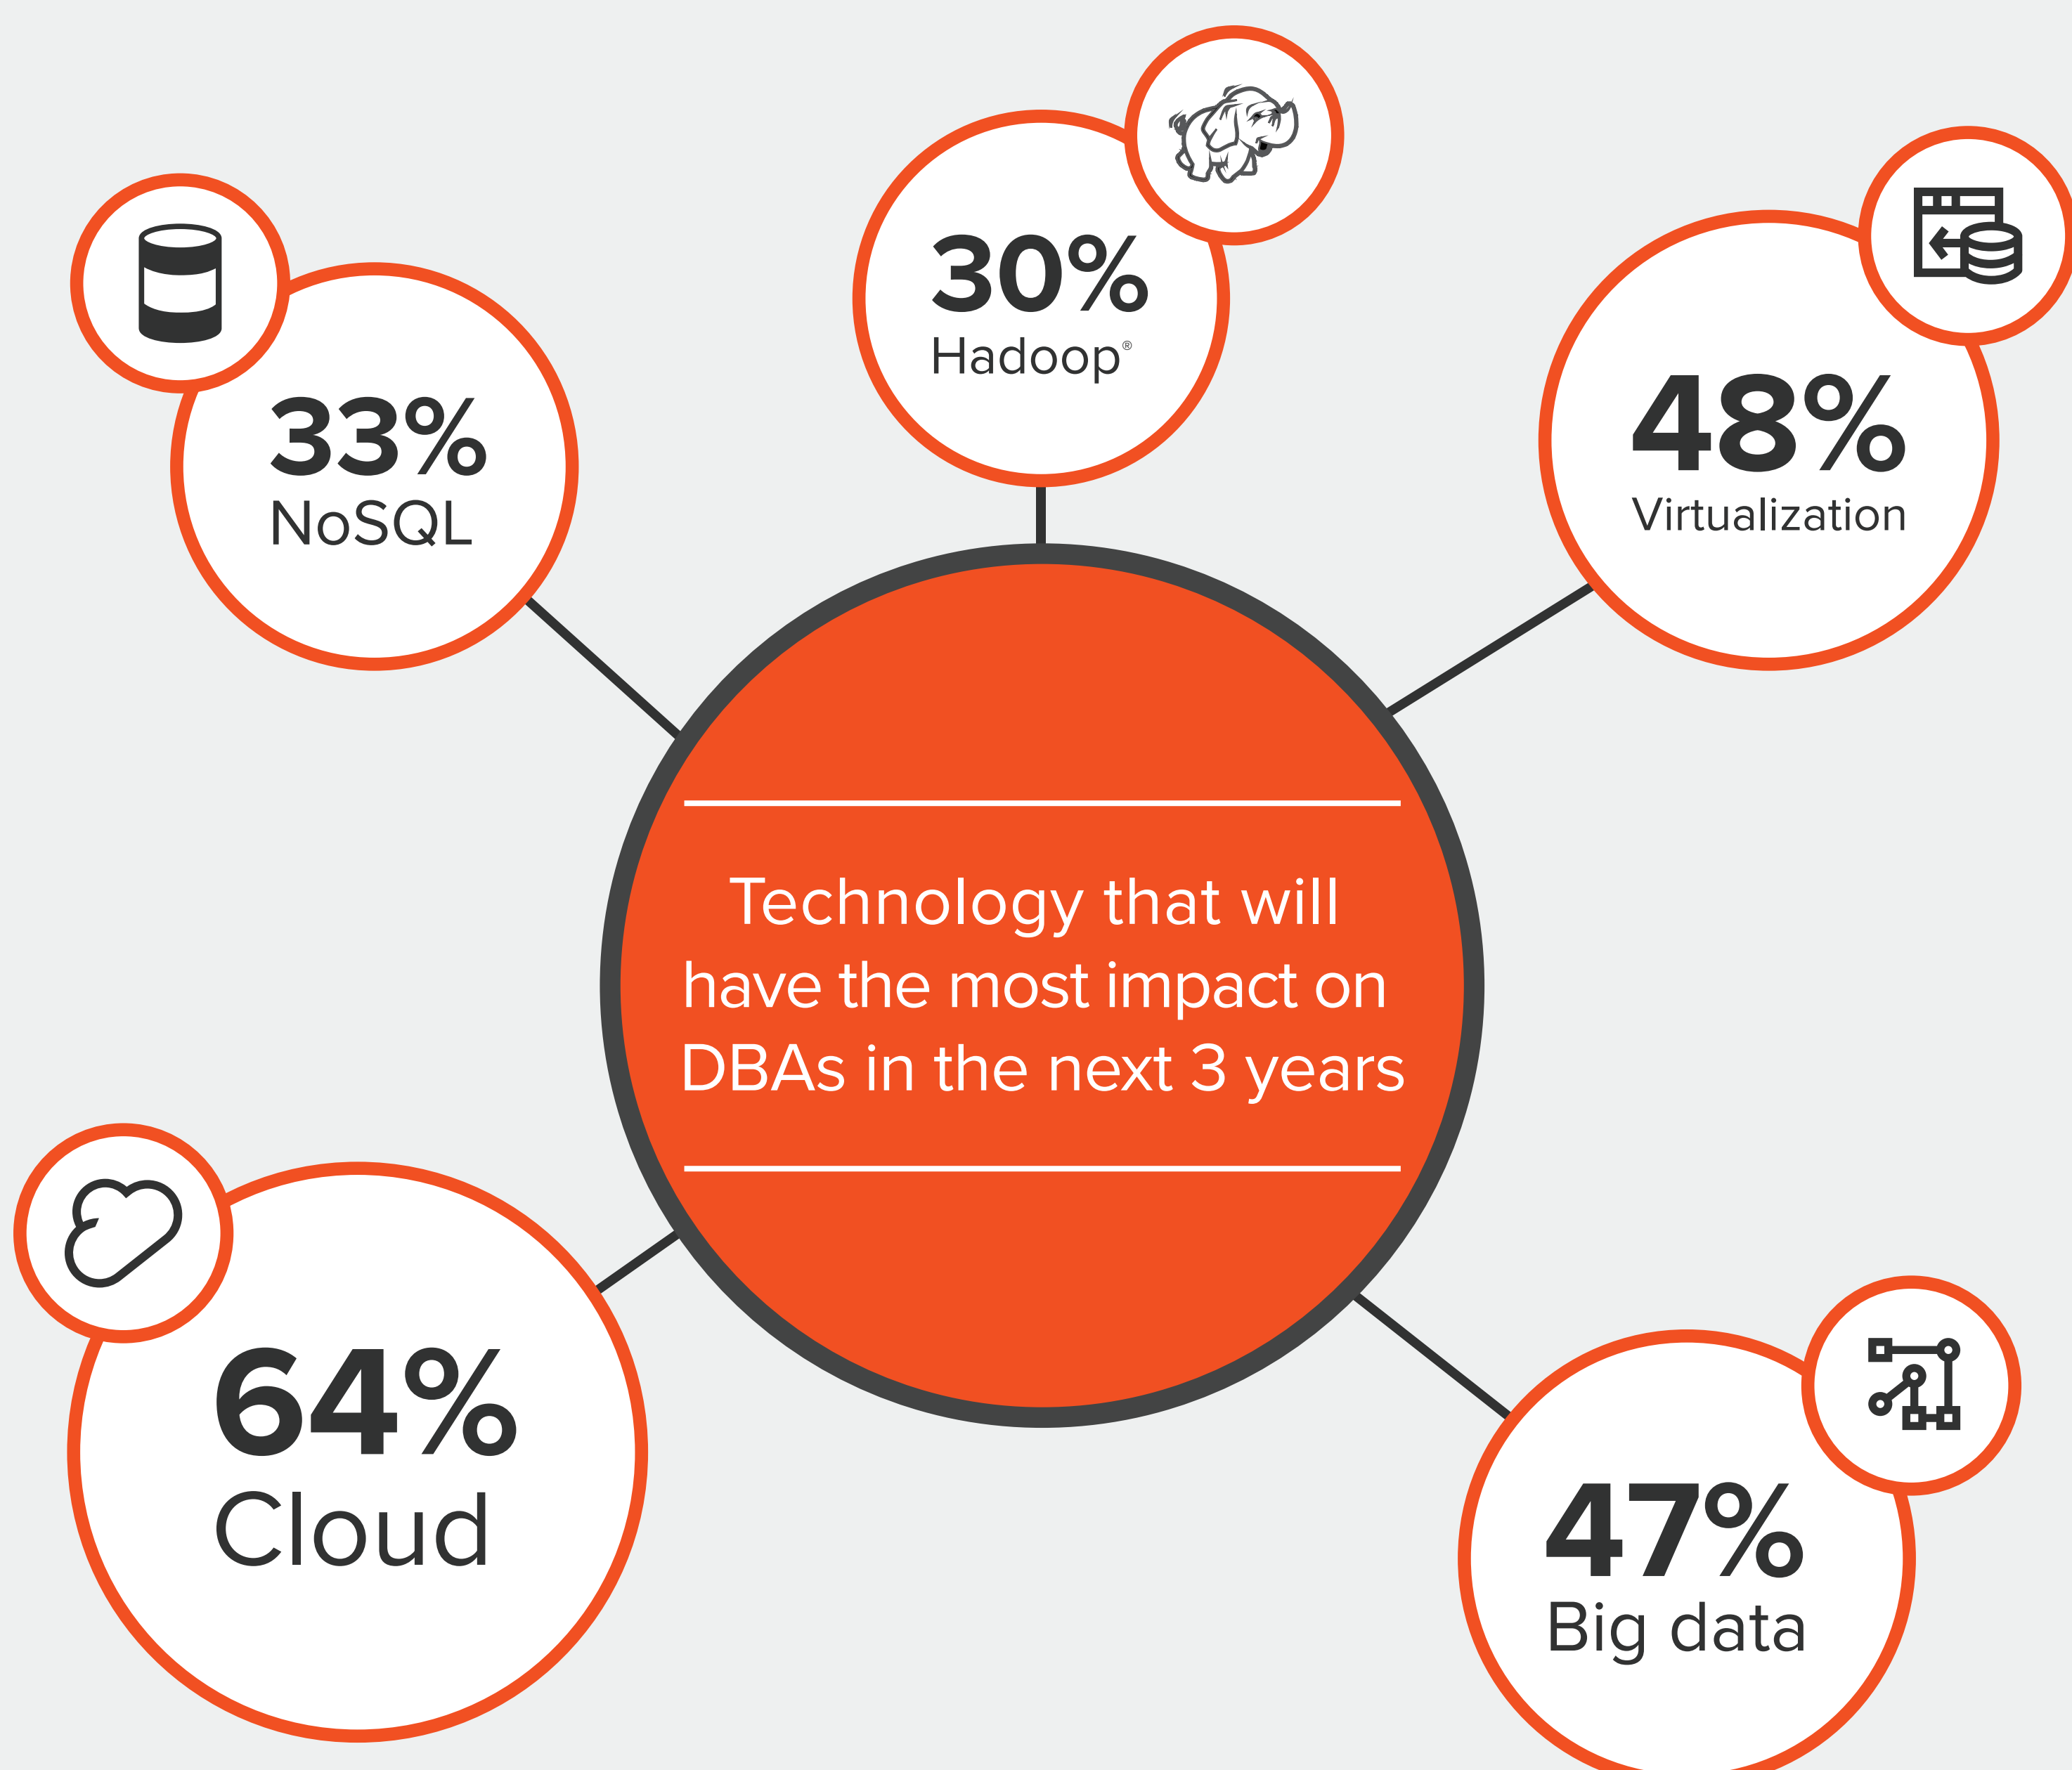

Most important sources of structured data growth:

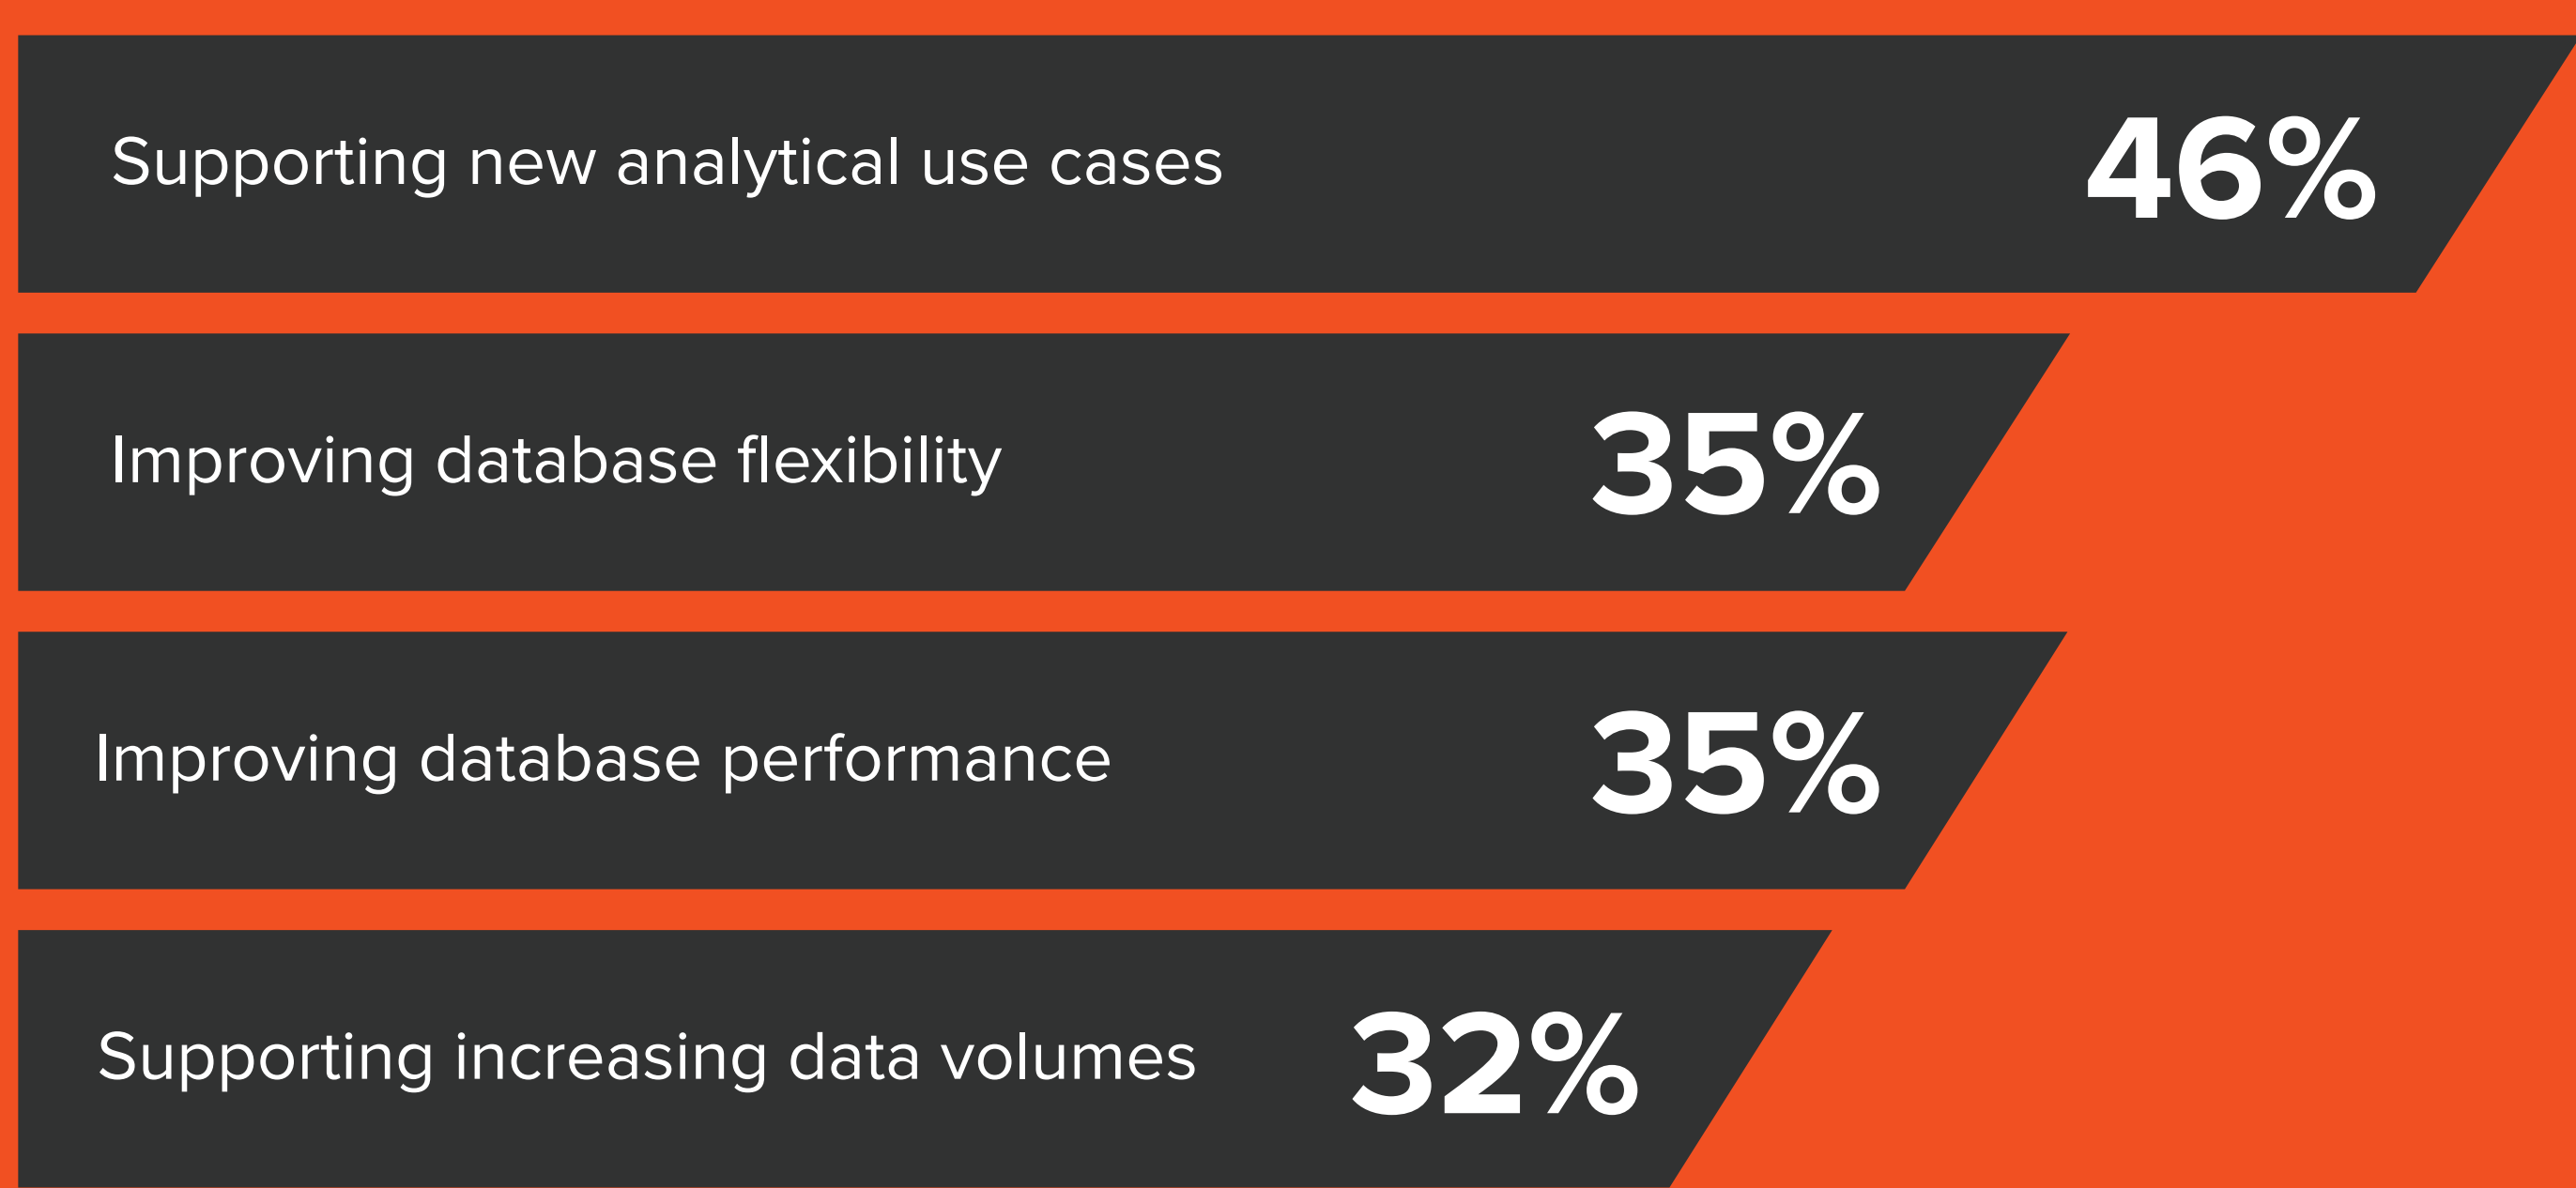

Most important sources of unstructured data growth:

Technology that will have the most impact on DBAs in the next 3 years

Most important factors driving the adoption of new database management systems:

This suggests that platforms like Hadoop and NoSQL may be needed sooner than expected.
